Make a dry run with the saw OFF by conducting a simulated cutting cycle, and observe the projected path of the sawblade. Keep hands out of the path of saw blade. Check that auxiliary fence assembly does not interfere with head assembly. Basic Saw Operations Miter Detent Override clip should automatically disengage and the table should lock into any desired miter detent. Let the red tab spring back into a new groove. When the red tabs are rotated down to clamp the rods, they will grip the rods with greater strength. Lift miter detent lever and move the saw to the desired angle, using either the detents or the miter scale. Tighten miter lock knob Figure 32. 2. Extend the base extensions and fence on the side on which the cut will be made. To increase the length that can be cut using the length stop, replace the tool's base extension rods. Each chart lists the exact miter and bevel settings required for a wide range of corner angles. Tighten the miter lock knob and the bevel lock lever Figure 39. 2. Position molding on saw table. Clamp workpiece in place using the quick clamp. Use clamping position that does not interfere with operation. Only the miter angle is adjusted. Cutting Round or Irregularly Shaped Material. Set the miter angle and the bevel angle required before making the first cut. If you find yourself forcing the saw forward to cut instead of just guiding it through the cut, chances are the blade is dull or coated with wood pitch. Please make

Mitre saws accurately crosscut with presets that include all common angle settings. What's more, they offer the fastest and easiest way to cut angles as well as compound angles. Many mitre saws now also have a trenching facility which means you can produce housing joints and tenons with ease etc. A high build quality will give high accuracy for every cut whilst delivering the best results in terms of safety. Furthermore, the Bosch Axial Glide Mitre Saw uses a hinge style system for even greater capacity in width and depth of cut. A mitre saw has to be accurate and have positive settings so there is no movement when cutting. Care must be taken in use as with any machine and the work held firmly to avoid it grabbing. In doing so, this will narrow down your choice. Saws are generally categorised into blade size. For instance, a Bosch GCM8SJL is a 216mm 8" blade whilst a GCM12SDE is a 305mm 12" blade. Other manufacturers have different blade sizes so you will need to do some research and see what the stated capacities are on the individual machines. Many also allow you to adjust for other angles when required. Table adjustment is done from the front of the machine. It is important to check as some mitre saws feature a double bevel tilt, whereas some only tilt in one direction. With this in mind, if you are using a mitre saw for something like an intricate moulding it will not be so easy if the machine has only a single bevel. This is not only very beneficial but also saves time. Some lasers require manual adjustment, however many are preset.

<http://www.drupalitalia.org/node/72395>

This is particularly useful for tenoning or housing joints. These allow you to secure the work whilst keeping hands well away from the blade. If and when you need to increase the table length, many models are fitted with pull out extensions or bars. At the very least, opt for a mitre saw with roller support stands. This will allow for repetitive cuts. In contrast, some no longer require this due to the rail design which allows the saw to be put flush against a wall. Mitre saw blades are available with different tooth formations to cut not only solid wood and manmade board but also aluminium and plastics. This is because they can sometimes come out of alignment during the delivery process. Furthermore, if you are experiencing any kickbacks, when the saw physically kicks back after you hit a knot in the timber, it is advisable to check the accuracy again. For best practice, it is recommended to periodically check your mitre saw as it can come out of alignment if used frequently. This is because mitre saws can be quite hazardous if you don't wear the correct safety equipment. With this in mind, it is important to always wear the correct Personal Protective Equipment PPE when working with a mitre saw. This is imperative in terms of safety but it is also important to ensure the mitre saw does not malfunction. Dull blades and broken parts can lead to very serious, possibly even lifethreatening injuries if left unsorted. To avoid this happening, regular routine maintenance checks are necessary. Replace any broken parts and lubricate them occasionally to avoid any malfunction. By doing so, your mitre saw will be far more reliable and you'll reduce your chance of injury while using it. Get Best Deal I agree to the terms and privacy policy All rights reserved. Click Here Its light, powerful, compact, and accurate. The battery quickly whips the 10inch, 40tooth, thinkerf blade up to speed. The saw powers through all kinds of base, case, and crown, yet its blade stops quickly with a

powerful brake. Im not ready to drop my cords yet, but I had a good experience on my first runthrough with this saw. Out of the box, the saw needed some minor adjusting to get it to cut true 45s. All of the adjustment bolts are accessible and turn easily with the onboard hex wrench. I was able to tune the saw quickly, even though I wished I had another set of hands to tighten bolts while I held the alignment. Also, I had to tape the guard back while I made my adjustments. This tool has so much power you could cut base, case, and crown for a good while before realizing it has a battery. It acts like its plugged in. The saw made square cuts and the blade didnt wobble, bend, or bog down while the battery was fresh. It also cut a 2x6 at 90 degrees, and although I didnt try it, the company claims it will cut a 4x4 on a 45degree bevel. I noticed a little bogdown while cutting the 2x6, but cutting framing members isnt this tools main purpose. The stamped miter scale has two positive detents for 31.6 degrees left and right. And, when youre trying to decide which way to flip the crown for an outsidersight or an insideleft cut, theres a good reminder in the owners manual.

The company claims the new saw will provide up to 150 cuts on its two fully charged batteries which is enough, it says, to meet a trim carpenters needs for a days work. The detents are rocksolid and theres an accurate override for slightly offangle cuts. The fence to the left side of the blade adjusts with a lever and slides out when compound cutting. The table extension slides out, but not far enough to help support long material. However, the quickclamp holddown helps if youre working alone. And Bosch did a good job with the guard. It certainly didnt hang up anywhere, but its a little tough to see a light pencil line because the guards a little blurry. For more information, contact Bosch Power Tools; 8772672499. [www.boschtools.com](http://www.boschtools.com). Since these are highly powerful, you can even cut hard materials using such sliding miter saw. You can buy one for yourself by considering some essential factors and aspects of these miter saws, including the following A blade size of 12 inches in diameter offers better performance than a blade that has a diameter of 10 inches. It provides deeper cuts while easily cutting through hard materials. Due to this, the power of this motor is quite important as a powerful motor with a rating of 15 amps offers high cutting performance when compared with a 10 inch one. This includes options that offer high build quality and use carbide blades as they can last for a long time. You can also look out for sliding miter saws that come with a 5year long warranty as these last for a long time. And the detailed Buying Guide present in this article has all of the details regarding these saws. These things can be quite useful for buying the perfect sliding miter saw for you by going through this article until the end. It also offers a sliding miter saw that offers decent performance to the user. You get a powerful 15 amp electric motor in this saw.

[buddingheights.org/wp-content/plugins/formcraft/file-upload/server/content/files/1626c3fb85034d--98-sonoma-owners-manual.pdf](http://buddingheights.org/wp-content/plugins/formcraft/file-upload/server/content/files/1626c3fb85034d--98-sonoma-owners-manual.pdf)

This powers a 12inch cutting blade that is one of the largest options out there when compared with other options. You can use it to cut 6.75 inch deep objects without any issues. A great thing about Dewalt miter saw is that it offers a great build quality along with a 3year warranty. This is also true for its sliding miter saws mentioned in this article. Even then, you get decent performance from this miter saw. It comes with a 15 amp electric motor that offers high speed. While you only get a 2year warranty with it, its build quality is quite decent. You get a 60T carbide cutting blade in this saw that can easily last for a long time. This saw comes with a total of 9 miter stops for precision control. You can even find multiple sliding miter saws from Bosch out there. As per its name, it comes with a cutting blade that has a diameter of 12 inches that makes it one of the largest options out there. It uses a powerful 15 amp electric motor to power this cutting blade for easy cutting. A great thing about this miter saw is that it comes with an extended base design that offers a capacity of up to 14 inches to the user. But its sliding miter saw can be a great option for a lot of users out there. This blade is powered by a 15 amp electric motor that offers decent performance for the given price. One of the most unique features of this saw is that it comes with an inbuilt laser for extra precision. It

comes with a bevel angle range of 0 degrees to 45 degrees that can be easily adjusted. Another great thing about this miter saw is that it comes with an electric brake system feature. This even includes various sliding miter saw options. This is due to the reason that it offers an excellent build quality along with a 5year long warranty that is much better than other options out there. It uses a 15 amp electric motor that results in high performance while using this miter saw. This has a 60 tooth carbide that can easily last for a long time.

And due to this, its sliding miter saw is one of the most expensive options present in this article. It has a 10 inch blade that provides a balance between performance and size of this saw. Since it is powered by a powerful 13 amp electric motor that is more than enough for the given blade size. As for its miter angle, it offers 50 degree and 60degree miter angles according to the direction in which you are cutting. You also get a bevel angle cutting option of up to 45 degrees that is always great to have. As you would expect, it also offers a great sliding miter saw. Thankfully, as it is powered by a highly powerful 15 amp motor, you can expect it to offer high cutting performance. Its 2 steel rail system provides smooth movement while being highly sturdy. Despite its excellent construction, this saw weighs just 57.9 pounds that is quite good for portability if needed. You get a maximum vertical cutting capacity of 5. This is also true for its sliding miter saw option mentioned in this article. When combined with its 60 tooth carbide tipped blade, you can expect it to offer smooth and clean cuts. And since it has a 10inch blade, you get a maximum cutting depth capacity of 11.5 inches. The build quality of this saw is quite decent while it only weighs 30 pounds. It offers a decent bevel angle of 0 to 45 degrees along with a 52degree miter angle that is always great to have. Thus, we are here with another one from Hitachi here in this article. Due to this, you can expect this miter saw to easily last for a long time. It even offers a great performance due to its 15 amp electric motor. You get a bevel range of 0 degrees to 45 degrees along with a miter angle range of 0 degrees to 52 degrees, which results in precise control. Even though this saw has a sturdy build quality, it weighs just 24.2 pounds. It offers a total of 9 steps for its miter system that provides a range of up to 45 degrees in both directions.

You can rely on this blade for a long time as this 28 tooth cutting blade has carbide tungsten tips. This motor comes with a 3year long warranty that makes it highly durable and reliable. Its 1800 W electric motor has a maximum rotation speed of up to 2500 RPM. Thus, we are here with a detailed buying guide for miter saws. As you would expect, this buying guide has all of the important aspects of miter saws that you must know before buying one. This can be quite helpful to easily buy the perfect sliding miter saw for you by using this buying guide completely. The size of this blade is quite important to check. This is due to the reason that a larger blade offers better performance. A larger blade offers deeper cuts while cutting wood using your miter saw. You can find different sliding miter saws out there with a blade size of 12 inch or 10 inch. Apart from the size, you can also check the number of teeth in a given blade. This is due to the reason that a higher number of teeth results in smoother cuts. A 60 tooth blade performs better than a 48 tooth one. Since this motor is responsible for powering the blade, you need a saw with a powerful motor. Just like various other power tools out there, the power rating of the electric motor of a miter saw is given in amps. You can find motors with a power rating of 12 amps or 15 amps where the latter performs better. A powerful motor results in higher rotation speed in RPM and results in cleaner and smoother cuts while cutting wood. This can be quite useful while wooden pieces for making joints. The miter angle of a cut is essentially the horizontal angle of the cut. You can find a wide range of miter angle of up to 50 degrees or up to 60 degrees. This range is usually different for the left and right directions while cutting wood. As you would expect, a miter saw with a higher miter angle is considered to be the better option. Just like the miter angle, this can be quite useful for making joints.

Most of the sliding miter saw options out there come with a range of bevel angle. This includes a bevel angle range of 0 degrees to 45 degrees or 0 degrees to 60 degrees. As you would expect, a

wider range results in a better miter saw as you get high precision control while using it. This is quite important as the warranty can be quite handy to get it repaired down the road if you face any issues due to wear and tear. Most of the sliding miter saw options out there offer a 3year long warranty. But some of them even come with a 5year long warranty. You can expect such saws to easily last for a long time. Apart from the warranty, the build quality of a given saw can also be checked to get an idea of its durability. These generally offer highly precise control while cutting anything due to their various control options. And today, we have mentioned some of the best sliding miter saw options in this article. You can also find their major features and options, along with a detailed buying guide. This has all of the major aspects and factors regarding sliding miter saws. As you would expect, all of these things can be quite useful to easily choose the perfect sliding miter saw for you. But if you are still confused and not able to buy one, you can simply go with one of our recommendations Even though this is the cheapest option present in this article, it comes with a large 10inch cutting blade that is as good as other expensive options out there. This blade is powered by a 15 amp electric motor that allows you to easily cut through hard materials. Since this is a budget option, you only get a 2year warranty with it. Thankfully, you get an excellent build quality in it that is always great to have. Most of the other options out there come with a 2 year or a 3year warranty. But this one offers an excellent build quality along with a 5year warranty. It even offers equally good performance as you get a 15 amp electric motor in that powers its 12inch cutting blade.

You also get an ergonomic design along with high precision controls. This saw comes with a highly powerful electric motor that is rated at 15 amps. It powers a 12inch blade for easily cutting largesize objects using this saw. Its 3800 RPM electric motor can cut with sharp and clean cuts while used for cutting different materials. As Dewalt is a reputable brand of power tools, you also get a pretty good build quality along with a 3year warranty in it. You can also post any questions down there if you have any. Indicator is fas tened to the table. The front extend ed part of the table is called the miter arm. One for each extension. Blade wrench is stored in rear of saw. Has molded cord retainer for storage. Should be locked in the lower position during transportation.
