

bounty hunter legacy 3300 manual

TREASURE HUNTER'S CODE OF ETHICS:

1. Respect the rights and property of others.
2. Observe all laws, whether national, state or local.
3. Never destroy historical or archaeological resources.
4. Leave the land and vegetation as it was. Fill in the holes.
5. All treasure hunters must be judged by the example you set. Always obtain permission before searching any site. Be extremely careful while probing, digging, up, or dismantling trash items. And ALWAYS COVER YOUR HOLE!

5-YEAR LIMITED WARRANTY

BOUNTY HUNTER

The Legacy 3300 is a professional metal detector. While the most difficult aspects of metal detecting have been automated, it is a sophisticated electronic device which requires an understanding of some basic features and metal detecting concepts.

If you do not have prior experience with a metal detector, we strongly recommend that you:

- 1) **Adjust the Sensitivity to a low setting in the event of false signals.** Always begin use at a reduced sensitivity level, use at full sensitivity after you have become familiar with the detector.
- 2) **Do not use indoors.** This detector is for outdoor use only. Many household appliances emit electromagnetic energy, which can interfere with the detector. If conducting an indoor demonstration, turn the sensitivity down and keep the search coil away from appliances such as computers, televisions and microwave ovens. If your detector beeps erratically, turn off appliances and lights, especially those with dimmer switches.

Also keep the search coil away from objects containing metal, such as floors and walls.

- 3) **Read this manual.** Most importantly, review the **Quick-Start Demo** (p. 7-10) and **Basic Operation** (p. 9-12).

4) Use 9-volt **ALKALINE** batteries only. Do not use Heavy Duty Batteries.

To adjust, remove the screw from the underside, then press the silver button and move the arm rest to one of the. To install the batteries Remove battery cover by disengaging the clip at the back. Position the Detector a. Place the detector on a table, with the search coil hanging over the edge. Five "R"s are now displayed. VIII. Wave all objects over the Search Coil The Nail and PullTab will not be detected. In this mode, all types of metals will be detected. An object's PROBABLE identification is indicated by the arrows at the top of the display. In addition, the PROBABLE depth of coinsized objects is indicated by the rectangular segment indicators on the left side of the display. Discrimination Mode is a fixedstartpoint elimination system. Objects are cumulatively eliminated as the level of discrimination increases. NOTCH MODE To selectively eliminate a category from detection within the metallic spectrum, use the NOTCH Mode. The undesirable object is eliminated from detection The ZAP control is easy to use in the field. As you are detecting, and encounter an object which you wish to eliminate from detection, simply press the ZAP touch pad after detecting the object. Therefore, we have incorporated an audio feedback mechanism to alert the user to the nature of buried objects. The target value can vary middle of the LCD display, provides a each time the coil passes over the target, specific target value to help identify buried depending upon the angle of the object targets more accurately. A hobby metal detector is an extremely sensitive device; the search coil creates its own magnetic field and acts like an antenna. If your detector beeps erratically when the search coil is. It is important after sweeping the coil directly to sweep the coil at a consistent over the suspected target a few speed over the ground as you times, it is more than

likely. To GROUND BALANCE your detector 1. Bounty Hunter offers a robust and inexpensive pinpointer designed for this purpose.<http://rabotatver.ru/userfiles/admin/corghia2024-manual.xml>

Fill in the holes. 5. All treasure hunters may be judged by the example you set. Always obtain permission before searching any site. Be extremely careful while probing, picking up, or discarding trash items. And ALWAYS COVER YOUR HOLES. Rather, The following terms are used throughout the manual, and are standard user retuning is critical. If the detector sounds a constant With practice in the lost valuables. To make 1 Remove the l field, you will learn to better searching easier in very trashy battery cover by disengaging Press the "DISCRIMINATION "Xing" the target area. If your left and BATTERY detector beeps The target value can vary The detector defaults to ALL METAL mode after powering on. In this middle of the LCD display, provides a each time the coil passes over the target, specific target value to help identify buried mode, all types of metals will be detected. An object's PROBABLE depending up The undesirable object is eliminated from detection The ZAP control is easy to use in the field. As you are detecting, and encounter an object which you wish to eliminate from detection, simply press the ZAP touch pad after detecting the object. The ZAP control eliminates the most recently detected object category from detection. The category elimina While the LCD Liquid Crystal Display is very accurate in identifying buried 5 Pass the search coil over the same object again. Therefore, we have incorporated an audio feedback The ZAP control is easy to u The target value can vary The detector defaults to ALL METAL mode after powering on. An object's PROBABLE depending up If your left and BATTERY detector beeps Press the "DISCRIMINATION "Xing" the target area. With practice in the lost valuables. To make 1 Remove the l field, you will learn to better searching easier in very trashy battery cover by disengaging. This top model adds custom programming, a pinpoint mode and a manual ground balance adjust. This unit sets a new standard for value at this price point.

The Legacy 3300 is light weight, well constructed and deep seeking. This model is easy to use and features intuitive controls. This model is a great combination of quality features at a reasonable price. Discover the Bounty Hunter Legacy 3500 The Bounty Hunter Discovery 3300 model has been replaced by the Bounty Hunter Legacy 3500. This model features the latest design and electronics. This top model in the Legacy series adds custom programming, a pinpoint mode and a manual ground balance adjust. The ground balance adjustment eliminates the effects of minerals at the beach.

<http://drbillbaker.com/images/casio-116er-manual-free.pdf>

Feature for feature, this model goes far beyond the competition. At just over 2 pounds, the Legacy 3500 is light weight, well constructed and deep seeking. Crafted in the USA, this model features an easy to read jumbo LCD display with digital target identification and depth readings. The Legacy 3500 features a ground balance adjustment that allows the detector to operate in the toughest, most mineralized soil conditions. There are no complex adjustments or settings to worry about. Just turn it on and go. Start having fun with this model from your first time out. This model will locate coins, rings, gold and relics. Use it at parks or at the beach. No matter how you look at it, the Legacy 3500 offers the best quality, price and features. To top it off, this model is backed by a full 5 year warranty. Four Tone Audio Target Identification System While the LCD Liquid Crystal Display is very accurate in identifying buried objects, the user in the field does not always maintain the display screen in his field of vision. Therefore, we have incorporated an audio feedback mechanism to alert the user to the nature of buried objects. This audio feedback system first alerts the user to the presence and classification of objects, whose nature and location can be confirmed using the LCD display. The detector can sound four different tones, depending on the object detected. Dave is one of the top engineers in the metal detecting industry. He has designed leadingedge metal detectors for American manufacturers for over 25 years. The Bounty Hunter Legacy 3500 is one of his latest accomplishments for the Bounty Hunter brand. Many of his design platforms are the backbone of several companies high end product offerings today. Pictured below, you can see that the engineering team works hard and plays hard. Made In the United States 5 Year Warranty The Bounty Hunter Legacy 3500 is crafted in the USA and is backed with a 5 year parts and labor Warranty.

<http://www.amagato.com/images/casino-manual.pdf>

This model features an easy to read jumbo LCD display with digital target identification and depth readings. No matter how you look at it, the Bounty Hunter Legacy 3500 offers the best quality, price and features. A Deep Seeking Coil Design The Bounty Hunter Legacy 3500 metal detector features a cutting edge concentric search coil design. The triple spoke design punches down deep and cuts through iron and aluminum trash. The concentric coil winding produces smooth operation for all types of treasure hunting. Experience powerful, deep target detection and easy pinpointing. Understanding the Bounty Hunter Legacy 3500 Concentric Search Coil Design The Bounty Hunter

Legacy 2500 concentric coil is engineered with both an inner circle and an outer circle wire winding. The search pattern produced is cone shaped and is excellent for accurately pinpointing targets with ease. This Bounty Hunter Search coil includes the latest technology and is waterproof and electrostatically shielded. In general, larger search coils will give better depth with larger targets and better ground coverage. However, sensitivity to smaller objects may be sacrificed. Smaller search coils will offer greater sensitivity to smaller objects and improved target separation in trashy soil. This coil offers the perfect balance of depth and sensitivity. The Bounty Hunter legacy 3500 features motion discrimination and an all metal pinpoint mode. The numeric target identification accurately identifies buried targets on a scale from 0 to 99. The programmable discrimination provides 4 tone target identification and 7 segment target elimination. The 11 segment digital target identification helps you identify what is in the ground. The notch discrimination filters out junk while still locating gold and valuables. You will enjoy the jumbo LCD display. This unit features a motion discrimination mode and an all metal mode. Targets are identified with a four tone 4 tone audio target response.

You can easily identify the targets before digging. A notch discrimination filter gets rid of junk while still locating gold and valuables. A zap mode lets you accept or reject specific targets. The coin depth is shown on the digital display from 0 to 8 inches. The legacy 2500 features a squelch tech noise reduction circuitry digital touch pad controls. The design features a padded arm rest, adjustable aluminum stem and comfort hand grip. Circuitry producing different audio tones for each target's conductivity range, i.e., low tone for nickel, high tone for coins. The type and amount of batteries used to operate the detector. An indicator to show the user how much battery life is left. The company that produces the detector. Some accessories are designed to be used with a specific device An onboard flashlight. The size and dimensions of the search coil The country where the detector is made An indicaton on the display showing the approzimate depth of the target. A feature available on many detectors that allows the device to filter out signals from minerals in the ground, while accepting signals from actual targets. The size of the headphone jack Holsters are typically included with Pin Pointers Bonus items are shown pictured with the device on the product page are included with this product The overall length of the model when fully assembled Operating modes would include, but are not limited to, discriminate mode and allmetal mode The frequency at which the detector operates. The type of circuitry the detector uses. Typically, you will see VLF Very Low Frequency detectors, and PI Pulse Induction detectors. A mode available on the detector that enhances the accuracy of the detector in a nonmotion mode to allow for precise target location Preset programs are available preprogrammed by the factory. The shape of the search coil. Typically, you will see round, elliptical, or teardrop shaped coils.

klingende-zeder.de/wp-content/plugins/formcraft/file-upload/server/content/files/1626faa1ab408b---bose-awr1-manual.pdf

The type of search coil Most commonly concentric, DD also known as widescan, and Mono available for some PI detectors. This adjustment affects how sensitive the detector is to targets, and ultimately how deep they will be able to be detected. The size of the shirt A vibration feature that allows users to feel targets being detected. A visual target ID that allows the user to determine the composition of the target being detected before digging. Typically, a visual target ID is a numerical display based off the conductivity of the target being detected. The amount of time the manufacturer will cover any broken parts or malfunctioning electronics. The degree to which the detector is resistant to water. Weatherproof implies that the detector is resistant to splashing and rain. Send Question Question will be displayed after moderation. Would the Bounty Hunter 3500 be a good choice for someone who really wants to get into this hobby. Question by Cathy on Oct 4, 2017 112200 PM Link Yes, the Bounty Hunter Legacy 3500 is a great choice for someone looking to get started, but also wants some advanced features. This model offers more discrimination options than other detectors for the price range, while also having a ground balance, and sensitivity adjustment. Would the

Bounty Hunter Legacy 3500 metal detector be a good choice for my 8 yr. Is it water proof Question by James Oldfield on Sep 11, 2018 52600 PM Link The search coil on this metal detector is waterproof, so you will be able to search in shallow water. The control box is NOT waterproof, so it can not be submerged, or used in the rain. What if I was looking for a 10 inch search coil. Question by Jerry on Jun 14, 2016 101200 AM Link Any of the compatible coils and accessories can be found in the related products section of the product page. But here is a quick link to the Bounty Hunter 10 inch search coil..and of course the coil cover.

How will the gold nugget coil work on my legacy 3500 for the settings and how will it show up what does it read as also Question by Andrew Ruggiero on Mar 21, 2019 105800 PM Link The 4 inch coil will certainly be a great option for the 3500 if you're looking for gold nuggets. It will still be able to detect all metals, but it will enhance the detector's ability to detect small targets, like tiny gold nuggets. Question by Kari on Apr 8, 2019 111600 AM Link All frequencies are able to detect gold, but higher operating frequencies will allow a detector to become more sensitive to natural gold nuggets, which are typically very small targets. Gold coins and jewelry are typically larger than the nuggets you'll come across, so most detectors can handle that. What are all the Rs showing on my Legacy 3500 Bounty Hunter LCD screen Help! Question by MadRiverJack on Jul 14, 2017 32700 PM Link The Legacy 3500 has many top end features such as NOTCH discrimination. Clear filter Total Reviews Search reviews Search Please wait. Offer Expires in Industry Reviews Whites Electronics is looking forward to working with Michael, Daniel and the MetalDetector.com team. Their experience in the metal detecting industry is unmatched. I have enjoyed working with Michael, Daniel and their team at Detector Electroics Corp. They have done a fine job representing the Detector Pro line since it was first introduced in 1996. One of the things I see them do is go the extra mile for their customers. It is always nice to see a family run business endure and we wish them many years of continued success.

We appreciate the partnership from Michael and Daniel at MetalDetector.com. As a family owned business, we choose our partners carefully. We have found that their team has done a fine job of representing our line. With thirty years of success under their belt, we expect that they will be a partner for many years to come. We at Treasure Products, manufacturer of the VibraProbe and VibraTector, want to congratulate Daniel and Michael on the admirable milestone of being in business for over three decades. The dedication and product knowledge that your staff exhibits has been a great benefit to us. We offer our best wishes for your continued success. I have found that the team at MetalDetector.com has done a fine of job representing the entire JW Fishers line. They have partnered with us in helping to bring our products to both individuals, larger corporate and governmental organizations. Michael and Daniel have established a knowledgeable team that has done the job of getting the correct product in to the hands of each consumer. I wish them continued success as they represent our products in the years to come.

I have been impressed by the professional approach and the experience of Daniel, Michael and the entire team at Detector Electronics Corp. Three decades of superior customer care has been the key to their success and large sales volume. We have enjoyed working with Michael, Daniel and their esteemed team at Detector Electronics Corp. We feel that they have been the best choice for representing the good reputation of the Makro Detectors in the region. They have been working towards 100% customer satisfaction ever since they started their cooperation with us as our exclusive Distributor in the USA and Canada. We are pleased to see both their business and the sales in their region continue to grow. It is nice to see both our family business and theirs growing together. We see our companies moving forward together for many years to come. Garrett has a longstanding quality relationship with Detector Electronics Corp since the 1980s. I have seen them grow from a regional dealer to one of the largest internet dealers yet they have maintained that special care for the customer for over three decades. Their team of knowledgeable, helpful and friendly staff and family make their dealership a first choice for the treasure hunter. MetalDetector.com has been a valuable business partner to Fisher Research Labs for many years. They continue to grow while still offering the best in customer service and after sale support, which is very important to FRL. We wish to congratulate them on 3 decades of business and stellar service to our mutual customers. Their entire staffs knowledge of our product helps to ensure the customer gets the right detector for their needs regardless of what they might be. We look forward to our future relationship and continued success of MetalDetector.com and their entire staff. I recently had the pleasure of meeting with the team at MetalDetector.com at their newly expanded facility in Southborough, MA.
